ERP for Water Plants - Beverages Units

Water Plants - Beverages Units

Irshad AI ERP for Water Plants - Beverages Units (RO, mineral water and filling plants): home orders from your own order page or WhatsApp, delivery riders and rounds, the bottles each customer holds and their security deposits, refills at the counter, water test records, and the plant's accounts and salaries. Works on a phone.

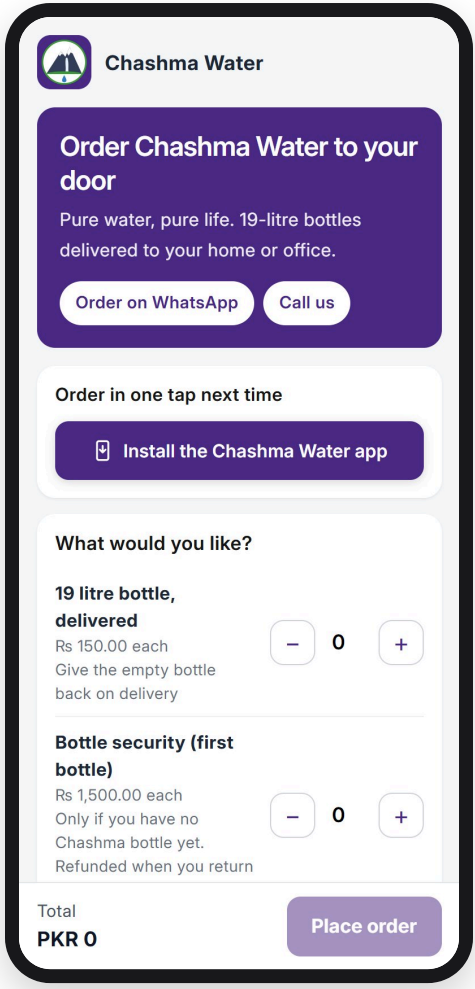
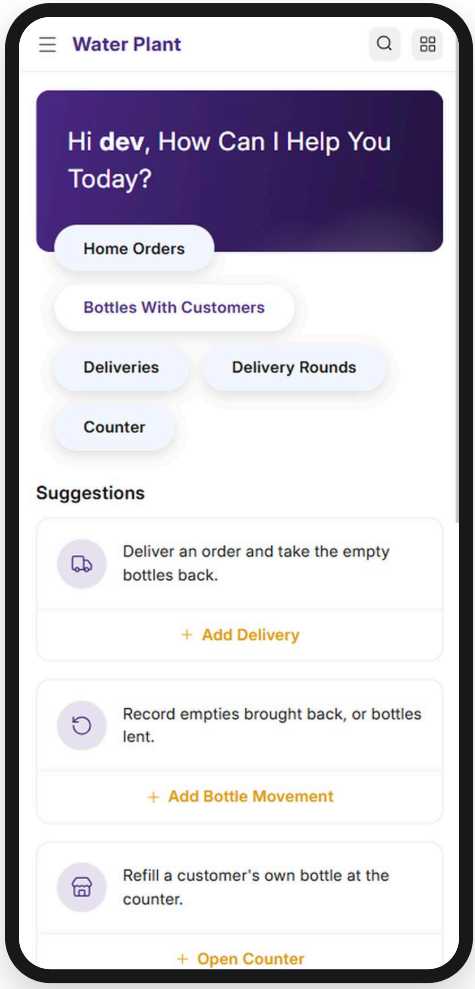
Your own order page for customers

Customers order 19-litre bottles from a page with your name, logo and prices, or tap to order on WhatsApp or call. They can install it on their phone like an app and order again in one tap. Each order lands in the ERP as a home order. This is the order page of Chashma Water, our demo plant.



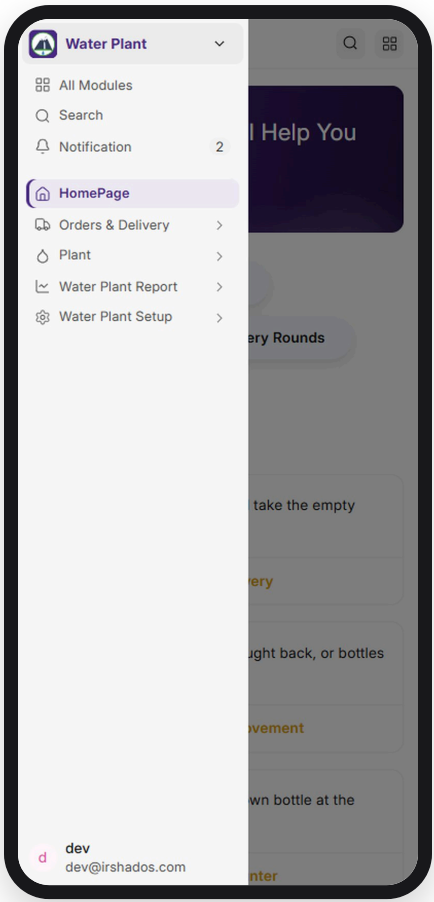
The whole plant on one screen

Home orders, bottles with customers, deliveries, delivery rounds and the counter open from the Water Plant home. The screen suggests the next job: deliver an order and take the empty bottles back, record empties brought back, or refill a customer's own bottle at the counter.



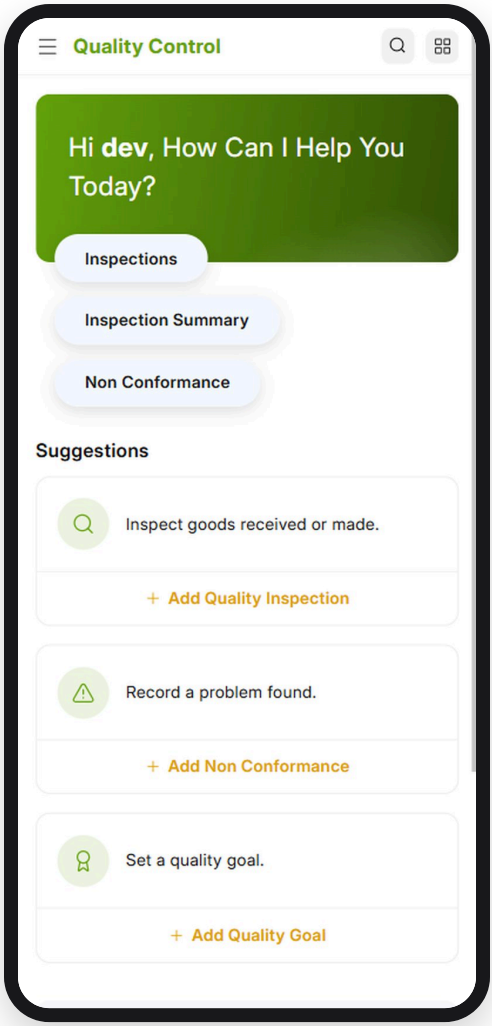
Every bottle and every rupee of security

The ERP knows how many bottles each customer holds: bottles delivered, minus empties taken back, plus bottles lent or lost. Bottle security is kept apart from sales as money you owe back, and is shown against each customer. Riders, the counter, the office and the accountant each get only their own screens.



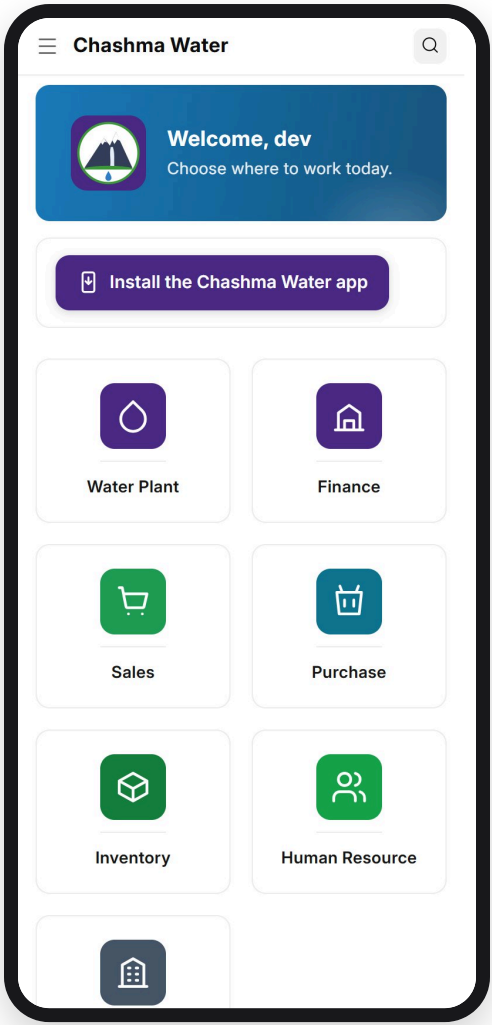
Water tests on record

Each water test is entered against a drinking-water template, with problems found and what was done about them. Filter changes and plant maintenance are logged under Assets. The records are ready when the food authority asks for them.



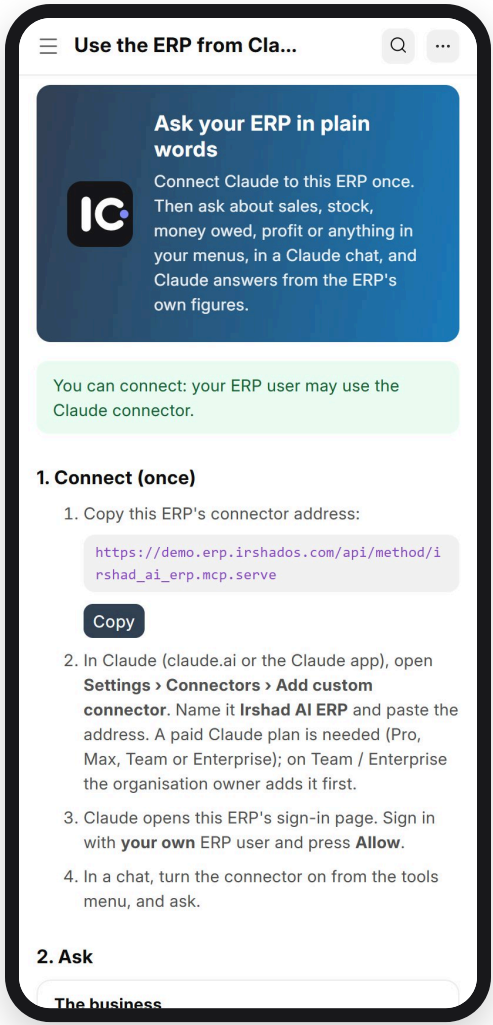
Your own app for the staff

The plant's staff open the ERP from an app with your name and logo on their phone. Only this business's modules show: Water Plant, Finance, Sales, Purchase, Inventory, Human Resource, Assets and Quality Control.



Ask your ERP

Ask "how many bottles does each customer in Johar Town hold?" or "how much security have we taken this month?" in plain language, and the answer comes from your own records. Each person sees only what their role allows.



Questions

Is this for my business line on eBiz Punjab?

Yes. It is built for the business line the Punjab eBiz portal calls Water Plants - Beverages Units: RO and mineral water plants, filling plants and bottled water units.

What does it cost?

The first year is free, and we set it up for you with your name, prices and delivery areas. Ask us about the price after the first year.

Can I try it?

Yes. Chashma Water is a demo plant we set up to show it. Place a test order as a customer at chashma.irshados.com/order, then open the live demo at chashma.irshados.com/login to see the plant side: the sign-in is filled in for you.

We fill on demand. Does that fit?

Yes. Water is sold as a service, a 19-litre bottle delivered or a refill in the customer's own bottle at the counter. Pre-filled 1-litre and 1.5-litre bottles can be added later with the production module.

Can we give discounts to nearby customers?

Yes. Give a discount on the order or at the counter, or set it once for an area, so every customer there gets it.

What do the riders see?

Only their deliveries, delivery rounds and the bottles they take back, on their phone. They do not see the accounts.

How we set it up for you

1. **Walk through how you work**
   A short call or a few screenshots per department: what you enter, what you print, which reports you open every day.

2. **Set up and import**
   Your own installation, with your chart of accounts, customers, products and opening balances, checked against your trial balance.

3. **Fit the screens and prints**
   Your field names, invoice and voucher layouts and approval steps, on a copy you test before anything goes live.

4. **Go live and support**
   Start on a month's first day, then training per department and a monthly retainer for questions and changes.
