IrshadOS

Irshad AI ERP for schools, colleges and academies

Schools, colleges and academies

For private schools, colleges and academies: admissions, students and guardians, classes and courses, attendance, exams and results, fee bills for a whole class in one go, and teachers' salaries in the same books. Works on a phone.

The whole school on one screen

Admissions, students, fee schedules, fee collection, the attendance sheet and the course schedule open from the Education home. The screen suggests the next job: admit a student, bill a class or mark attendance.

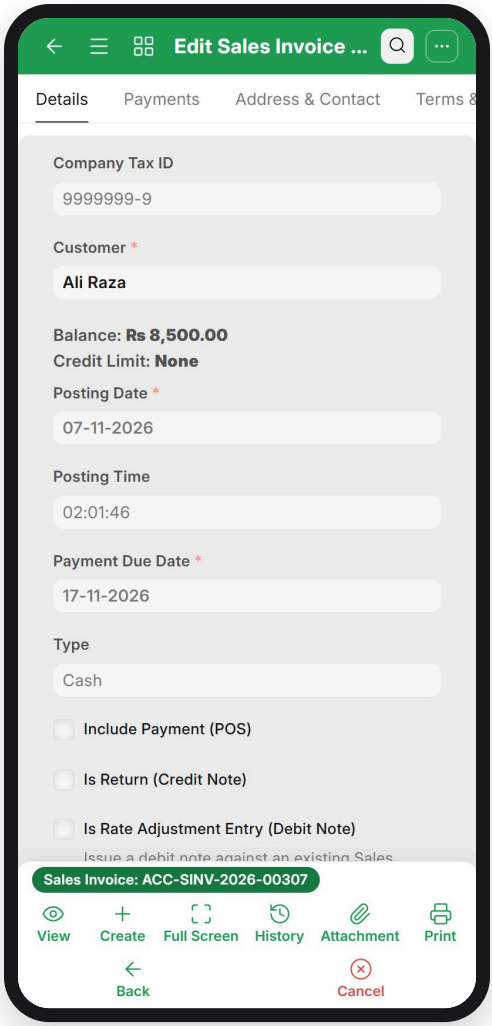

Bill a whole class at once

Set each class's fee structure once. A fee schedule then bills every student in the class in one step, with a due date, and shows what has been collected and what is still outstanding.

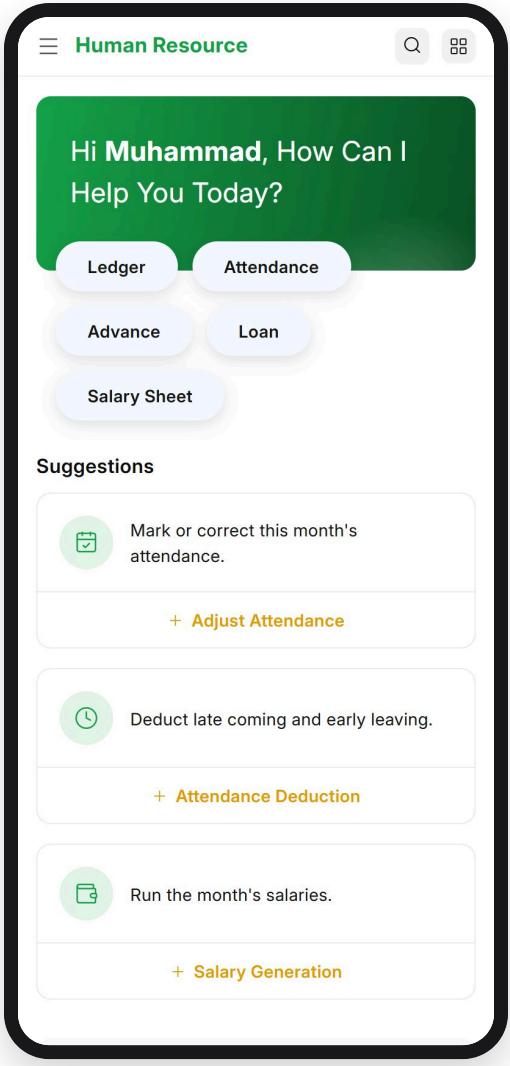

Every student's fees in the accounts

Each student's bill is an ordinary invoice in the school's books, with the balance in view. Fees received post to cash or bank, so the accountant sees fees, expenses and salaries in one profit and loss.

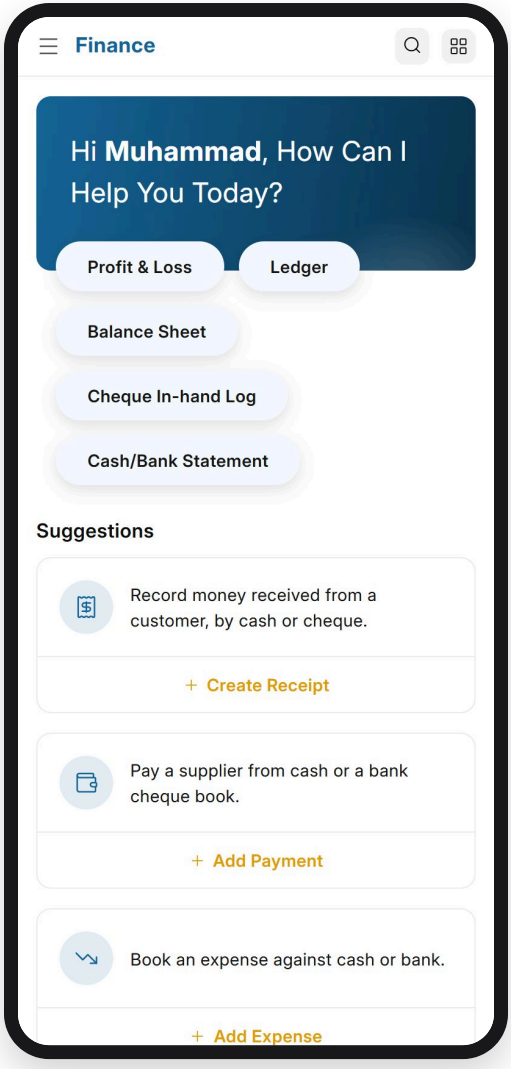

Teachers and staff, paid on time

Attendance, leave, advances, loans and the monthly salary sheet for teachers and staff, with deductions for late coming and salary tax slabs set for your country.

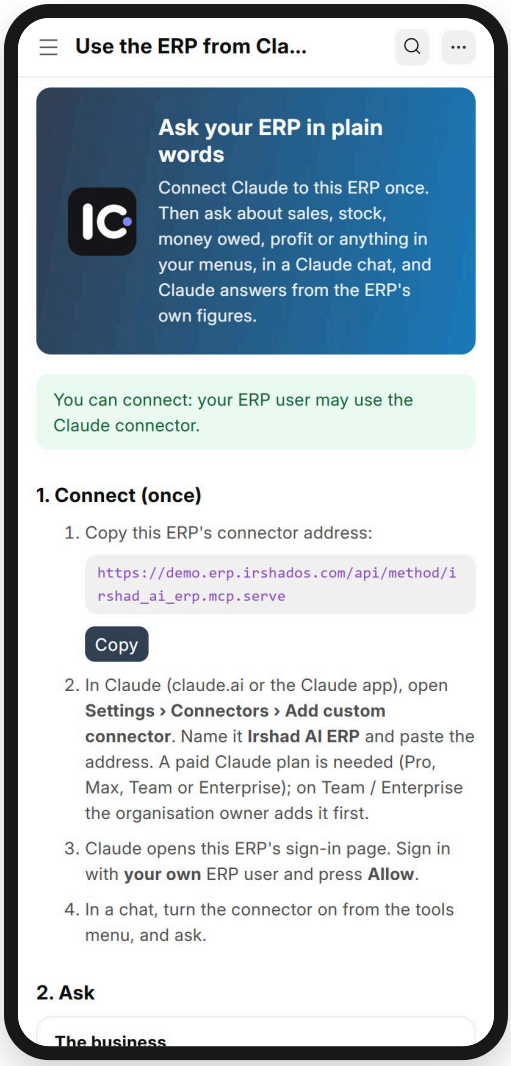

Cash, bank and the school's accounts

Receipts and payments by cash or cheque, expenses, cash and bank statements, ledgers, profit and loss and the balance sheet.

Ask your ERP

Ask "which students have not paid this month's fee?" or "fee collected by class this term" in plain language, and the answer comes from the school's own records.

Questions

Does every student or parent need an email or a login?

No. A student is entered with a name and class; an email and a parents' login are optional.

What else does it keep for students?

Admissions and enrolments, guardians, class groups, daily attendance and leave, courses and schedules, assessment plans and results, and reports such as the monthly attendance sheet, absent students and final grades.

Can we bring in our current students and fee balances?

Yes. We import students, classes, fee structures and opening balances from your spreadsheets or current software, and check them with you before the first fee run.

How we set it up for you

1. **Walk through how you work**
   A short call or a few screenshots per department: what you enter, what you print, which reports you open every day.

2. **Set up and import**
   Your own installation, with your chart of accounts, customers, products and opening balances, checked against your trial balance.

3. **Fit the screens and prints**
   Your field names, invoice and voucher layouts and approval steps, on a copy you test before anything goes live.

4. **Go live and support**
   Start on a month's first day, then training per department and a monthly retainer for questions and changes.
